

**Template for a USNC-URSI Radio Science Meeting One-Page Abstract**  
**(Replace these lines of bold text with your title.)**

First A. Author<sup>(1)</sup>, Second B. Author<sup>(1)</sup>, and Third C. Author<sup>(2)</sup>

<sup>(1)</sup> The University of Here, Anywhere, VA 12345, USA, <http://www.here.edu>

<sup>(2)</sup> The Next Company, Neverland, WA 54321, USA ([author@next.com](mailto:author@next.com))

These instructions provide guidelines for preparing your one-page abstract for the USNC-URSI Radio Science Meeting. The margins and required spacing between different sections are demonstrated for the author's convenience. The required format is a single page abstract of at least 250 words. The abstract should briefly describe the scope of the work and identify the focus of the presentation at the meeting. The abstract should indicate what new knowledge is contributed and the relationship to previous work.

The language of the symposium and the abstract is English. The text should be formatted single-column, single-spaced and sized for 215.9 × 279.4 mm (8.5 × 11 inch) paper. The title should be centered 1 inch from the top of the page and put in bold. The name(s) of the author(s) and complete organizational affiliation should start two lines below the title (organizational websites are optional). Email addresses for the authors are optional but encouraged. The text should start two lines below the last affiliation. All margins (left, right, top and bottom) should be 25.4 mm (1.0 inches). Paragraphs are to be separated with one blank line, with no paragraph indentation. The font should be Times New Roman and the font size should be at least 11 point to maintain readability. All submissions will be electronic and in a PDF format.

Do not include a list of references. A few open-literature references may be included parenthetically, for example: (R. L. Lewis and J. R. Johler, *Radio Sci.*, 2, 75-81, 1976).

Equations are allowed, as shown in Eq. (1) below. Equations should be centered. Faraday's law, for example, is

$$\nabla \times \vec{E} = -j\omega\mu\vec{H} - \vec{M}. \quad (1)$$

Embedding figures within an abstract is allowed. Please make sure that the figures are clearly readable. An example is shown in Fig. 1.

Figure 1: The URSI logo (left) and the USNC-URSI logo (right).

Statements of financial support are discouraged. When required, a brief acknowledgment of financial support may optionally be included at the end of the abstract, e.g., "This research was supported by the ABC Company."
